

Script-Controlled ACL – Restrict Record Access Based on Field Value

1. Ideation Phase – Completed Answer

Project Name: Script-Controlled ACL – Restrict Record Access Based on Field Value

Source basis: The reference lab states that only users belonging to the EEE branch are allowed to view records where Branch is EEE, while administrators retain full access.

1.1 Define the Problem Statements

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An EEE branch user	View institution/student records belonging to EEE	Records may contain other branch data	Access must be restricted by branch	Concerned about unauthorized visibility
PS-2	A ServiceNow administrator	Provide controlled record access	Role-only access may not express the record rule	The read rule depends on role and Branch	Concerned about data exposure

1.2 Empathy Map

Says	Thinks	Does	Feels / Needs
"I should see records relevant to my branch."	Access should be limited to authorized records.	Opens the Institution Details list.	Needs predictable, controlled access.
"Administrators should retain full access."	Admin users need unrestricted visibility.	Administrator opens the same list.	Needs confidence that admin access works.

1.3 Brainstorming and Idea Grouping

Group	Ideas
Access control	Role-based ACLs; record-level READ ACL; CREATE/WRITE/DELETE ACLs
Record condition	Branch-based condition; EEE-only visibility
Administration	Admin full-access rule; Security_admin elevation while configuring ACLs
Verification	Impersonate EEE user; impersonate administrator; test users with/without required roles

1.4 Idea Prioritization

Priority	Selected idea	Reason
1	Script-controlled READ ACL with Branch = EEE	Directly implements the core lab rule.
2	Role-based CREATE, WRITE and DELETE ACLs	Extends the security model to record operations.
3	Impersonation-based verification	Explicitly required by the lab.
4	Admin full-access condition	The supplied script explicitly permits administrators.

Team ID, team members and actual workshop dates are not supplied by the reference material and are therefore not invented.
